Sprint 3 — Demo Runbook

Roughly 10 minutes. Each act maps to one of the Sprint 3 requirements, so the audience sees the requirement and the working feature side by side.

Before you start — 5 minutes, do this the day before

1. Apply the migration — the demo does not work without it

Supabase → **SQL Editor** → **New Query** → paste all of `sprint3-demographics.sql` → **Run**.

Confirm it worked:

```
select policyname, cmd from pg_policies where tablename = 'demographics';
```

Three rows = good. **If you skip this, the demographics page will tell the participant their answers could not be saved, and the dashboard will read "migration not applied" in front of your audience.**

2. Load demo data — otherwise the dashboard is empty

Same SQL Editor → paste all of `demo-seed.sql` → **Run**. Creates eight fictional participants so every statistic and all three charts have something to show.

After running, the dashboard should read exactly:

PARTICIPANTS	STARTED	COMPLETED	ACCOUNTS	COMPLETION	IN PROGRESS	AVERAGE	DEMOGRAPHICS
8	7	6	7	86%	1	65.8%	5

If those numbers match, the seed landed correctly. **Clean-up SQL is at the bottom of `demo-seed.sql`** — run it when the demo is over.

3. Start the site

```
python3 -m http.server 5173
```

Open `http://localhost:5173`.

4. Clear the browser, or the demo will resume a previous run

DevTools → Console:

```
localStorage.clear(); sessionStorage.clear(); location.reload();
```

Do this again between rehearsal and the real thing. Answers are cached, so skipping it means Act 1 starts halfway through the survey.

5. Open two tabs

Tab 1 on the landing page, tab 2 on `admin.html` already signed in. Switching tabs is faster and calmer than signing in live.

Act 1 — Validation · Requirement R3

"*Participants cannot submit unless every question is answered.*"

1. Start the assessment and answer questions 1 and 2 normally.
2. On question 3, **click Next without choosing anything.**

→ A red message appears: "*Please select a response before continuing.*" Point out that it does not advance.

1. Choose an answer — the error clears immediately.
2. Answer a couple more, then click **Review answers** in the top bar.
3. On the review screen, point out the answers grouped by the four Firmin

categories, each with its own count, and the incomplete rows in red.

1. **Click Submit assessment.** Submission is refused, and the error names the

exact questions still missing.

> **The line to say:** "Nothing is scored, stored or emailed until all twenty questions are answered. This is the only path to submission, so a partial response cannot reach the database."

Act 2 — Completion and scoring · Requirement R4

1. Click **Go to question N** in the error, answer it, and work through the rest.

To move fast, use the number keys **1**–**5** and **Enter**.

1. Back at the review screen the status pill turns green: *20 of 20 answered.*
2. **Submit.** The completion screen appears.
3. Point out the buttons are briefly held with "*Saving your results…*", then

"*✓ Your results are saved.*"

> **The line to say:** "We hold those buttons until the write confirms, because navigating away mid-save was cancelling the request. And it only says saved when the database actually confirmed it."

Act 3 — Demographics · Requirement R1

1. On the completion screen, read out the question:

"*Are you happy to provide demographic information?*"

1. Click **Yes, I'm happy to** → the demographics page opens.

2. **Click Save without choosing anything** — all three fields show an error.
3. Select an age group, then choose **Gender** → **Other** to show the free-text box.
4. Complete all three and **Save** → results page.

> **The line to say:** "Every question offers *prefer not to say*, so we never force disclosure. The answers attach to this assessment record, not to a name. If a participant declines we record that too — otherwise we could not report a meaningful opt-in rate."

Act 4 — Results and report

1. Show the four category scores and the chart on the results page.
2. Open **View Full Report** and scroll the written interpretation.
3. Click **Export PDF** if time allows.

Act 5 — Admin dashboard · Requirement R2

Switch to tab 2.

1. **Participation band** — walk the four counts the client asked for by name:

participants, started, completed, accounts created. Note they are different numbers, and say what each means.

1. **Engagement band** — completion rate, in progress, average score,

demographics opt-in.

1. **Category results** — the bar chart, then the table beneath it with mean,

median, lowest and highest per category.

1. **Demographic summary** — the three bar charts.
2. **Participant table** — point out the mixed statuses, and the green *demo*

badge on participants who provided demographics.

1. Click any row → the profile opens showing that participant's demographics.
2. Click **Export CSV** and open it to show the four new demographic columns.

> **The line to say:** "Every count is defined explicitly, because *participants* could mean several things. We also found sessions that matched no participant record were being dropped from the totals entirely — those now appear as unattached sessions, so the participant count is honest."

If something goes wrong

SYMPTOM	CAUSE	WHAT TO DO
Demographics says it could not be saved	Migration not applied	Say so plainly and carry on — the flow still demonstrates. Run the migration afterwards
Dashboard says "migration not applied"	Same	Same
Dashboard is empty	`demo-seed.sql` not run, or run before the migration	Run the migration, then the seed, then hit **Refresh**
Survey starts mid-way	Browser storage not cleared	Run the clear command in step 4
Completion screen says "Saved on this device"	No connection to the database	Check wi-fi. The survey still works; only the save failed

---

After the demo

Run the cleanup block at the bottom of `demo-seed.sql` to remove the eight fictional participants. It deletes only rows whose ids begin `ddddddd`, so real participant data is untouched.
