FEDERATION UNIVERSITY AUSTRALIA · ITECH3208 CAPSTONE

Pedagogy Evaluation Platform *Sprint 3.*

Optional demographic collection · Administrator dashboard · Survey completion validation

WHAT WE WERE ASKED TO BUILD

Four requirements.

R1 Ask participants, after the survey, whether they will provide demographic information. If yes, collect age group, gender and academic level A–E, linked to the same survey response.

R2 Focus the sprint on the admin dashboard: participants, started, completed, accounts created, a TP / PD / TA / TPP summary, and demographic charts.

R3 Participants cannot submit unless every question is answered, an error is shown when incomplete, and results save only on completion.

R4 Verify all of the above by testing.

WHERE WE LANDED

All four *delivered.*

R1 · DEMOGRAPHICS

✓

Consent step, dedicated page, linked to the response

R2 · DASHBOARD

✓

8 statistics, category summary, 3 demographic charts

R3 · VALIDATION

✓

Two validation points, one completion gate

R4 · TESTING

✓

Full test script, plus 4 defects found and fixed

R3 · VALIDATION

Nothing partial *gets saved.*

- **At each question** — clicking Next without an answer shows an explicit message, instead of a silently disabled button
- **At submission** — a review screen lists all 20 answers by category; submitting while incomplete names the exact questions missing
- **One gate** — no score is calculated, stored or emailed until all 20 questions hold a valid answer

Live demo *one.*

Submitting an incomplete survey · the error message · the review screen · completing and scoring

R1 · DEMOGRAPHICS

Asked once, *never forced.*

- **Yes** → a dedicated page
- **No thanks** → straight to results
- **Either way** results are one click away

What we collect

Age group — 6 bands

Gender — with free text for “other”

Academic level — A to E

Every question offers *prefer not to say*.

R1 · DEMOGRAPHICS

Linked to the response, *not the person.*

- **Joined by session** — demographics attach to the same record as the scores, which is exactly what the requirement asked for
- **Declines are recorded too** — otherwise “85% opted in” would be unmeasurable; we could not tell a decline from never being asked
- **Write-once** — no update or delete permission exists, so knowing a session ID does not let anyone alter someone's answers
- **Anonymous participants included** — no account needed to contribute

R2 · DASHBOARD

Eight numbers, *each defined.*

PARTICIPANTS
Everyone non-admin, registered or anonymous

STARTED
Has at least one session

COMPLETED
Has at least one finished session

ACCOUNTS CREATED
Registered, not anonymous

COMPLETION RATE
Completed ÷ started

IN PROGRESS
Started, not finished

AVERAGE SCORE
Mean across completed

DEMOGRAPHICS
Provided, declined, opt-in rate

R2 · DASHBOARD

Categories and *demographics.*

- **TP / PD / TA / TPP** — the bar chart now sits above a table giving responses, mean, median, lowest and highest per category
- **Both read the same sessions** — so the chart and the table can never disagree with each other
- **Three demographic bar charts** — age group, gender, academic level; empty categories are dropped so small samples stay readable
- **Exportable** — four demographic columns added to the CSV for analysis

Live demo *two.*

The demographics page · then the admin dashboard, statistics, category summary and demographic charts

QUALITY ASSURANCE

Four defects found *before testing.*

1 **Save failures reported as successes.** The database client reports errors by return value, not by throwing. A rejected write passed unnoticed and the participant was told it saved.

2 **Navigating away cancelled the save.** Buttons are now held until the write confirms, capped at six seconds.

3 **Errors attached to the wrong question.** Two panels coexist during the slide animation.

4 **Review returned you to question 20.** Rather than to where you left off.

R4 · TESTING

What we *verified.*

- **Incomplete submission** — refused, nothing written
- **Error messages** — correct question, clears on answer
- **Scoring** — checked against manual calculation
- **Demographics** — accept, decline and skip paths
- **Dashboard** — all eight counts checked by hand
- **Degraded mode** — loads and explains, never breaks
- **Keyboard and mobile** — verified at 375px
- **Formal test script** — written, ready for the tester

SEQUENCED NEXT

Outstanding *items.*

1 **Database migration** — written and reviewed; additive, creates one table and alters nothing existing

2 **Testing phase** — the build enters formal testing against the written script

3 **Deployment** — follows test sign-off; we do not publish straight to the live site

4 **Email recipient** — switches from the development address before participants are recruited
