ITECH3208 Capstone · Federation University Australia

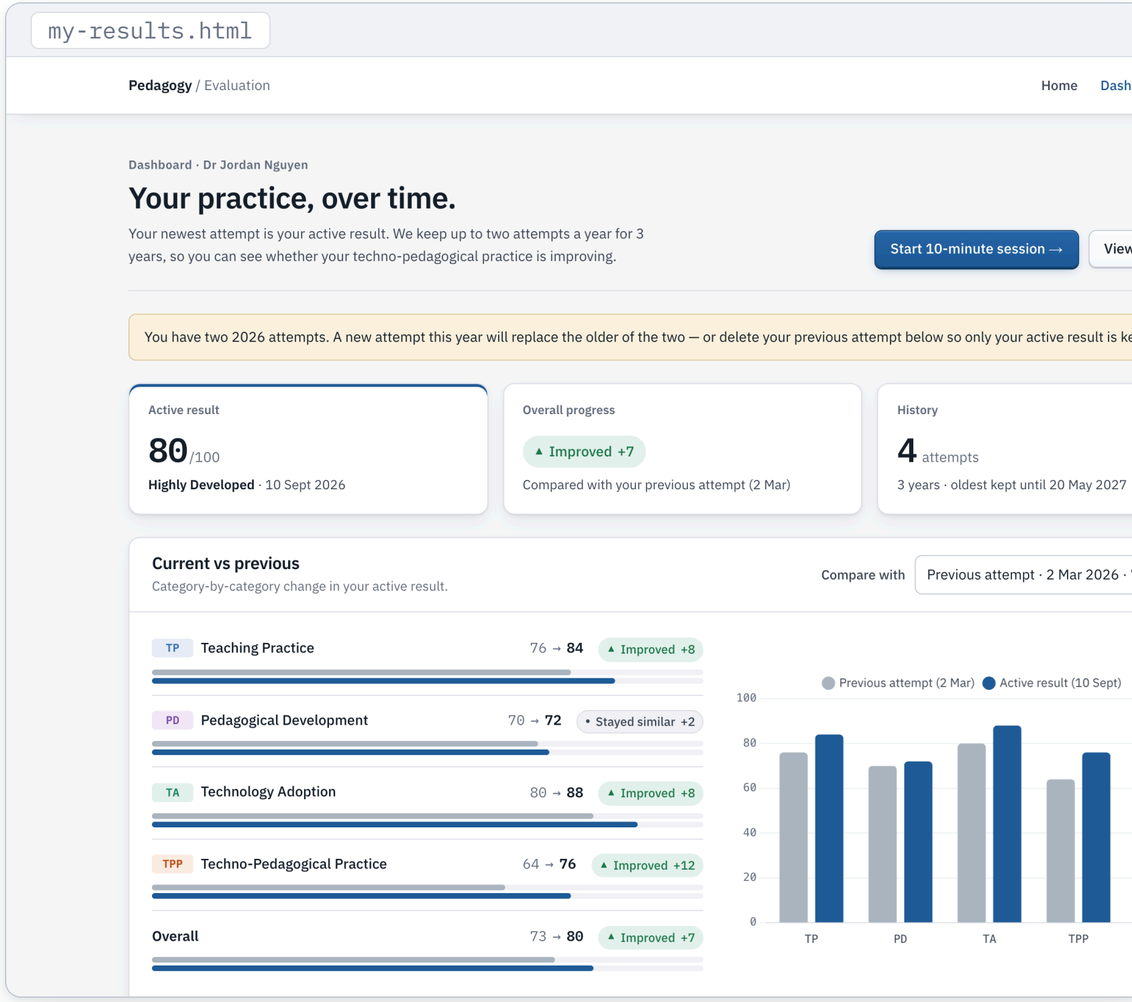

Pedagogy Evaluation Platform

Sprint 4 review

User dashboard · 3-year history · Two attempts · Historical comparison · 10-minute sessions · Anonymous until completion · Full redesign

Mushfiqur Rahman · Shafiullah Anik · Albin Roy · Merajun Nabi

Client: Dr Selena (Sally) Firmin

Sprint 4 in numbers

We shipped everything we committed to — and more.

6 / 6

backlog items shipped

7

pages redesigned end to end

3

production releases, each verified live

+5,657

lines added · −3,297 removed · 28 files

48

automated database checks, all passing

3

new database functions enforcing the rules

1

production outage diagnosed and recovered

0

data written before an evaluation is submitted

What the client asked for

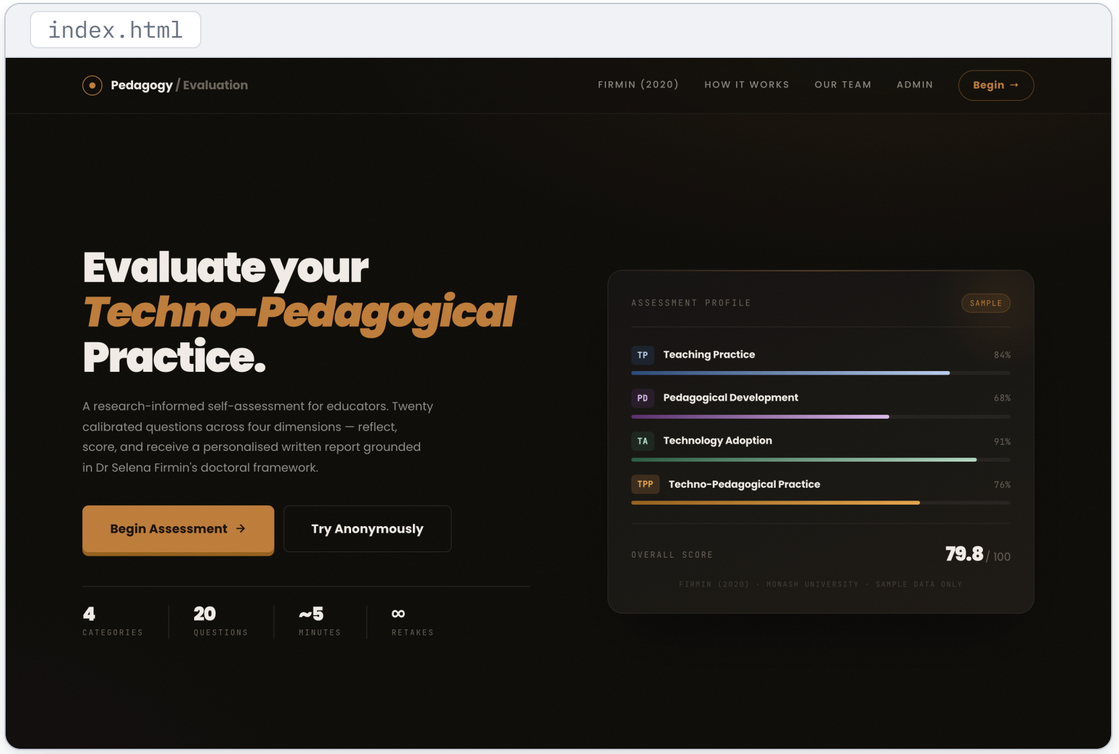

Six backlog items. Six shipped.

#	Requirement	What we built	Status
1	**User UI / dashboard**	Personal dashboard: active result, progress, history, attempts	Shipped
2	**Store and show up to 3 years**	3-year history, automatic purge after 3 years	Shipped
3	**Handle two attempts; delete / override previous**	Current + previous per year; delete at submission or from the dashboard	Shipped
4	**Historical comparison with graphs**	Improved / decreased / stayed similar per category; bar and year-to-year charts	Shipped
5	**10-minute session and expiry handling**	Visible countdown, warnings, expiry screen; server rejects late submissions	Shipped
6	**Anonymous until completion**	Nothing stored while in progress; one write on submit	Shipped

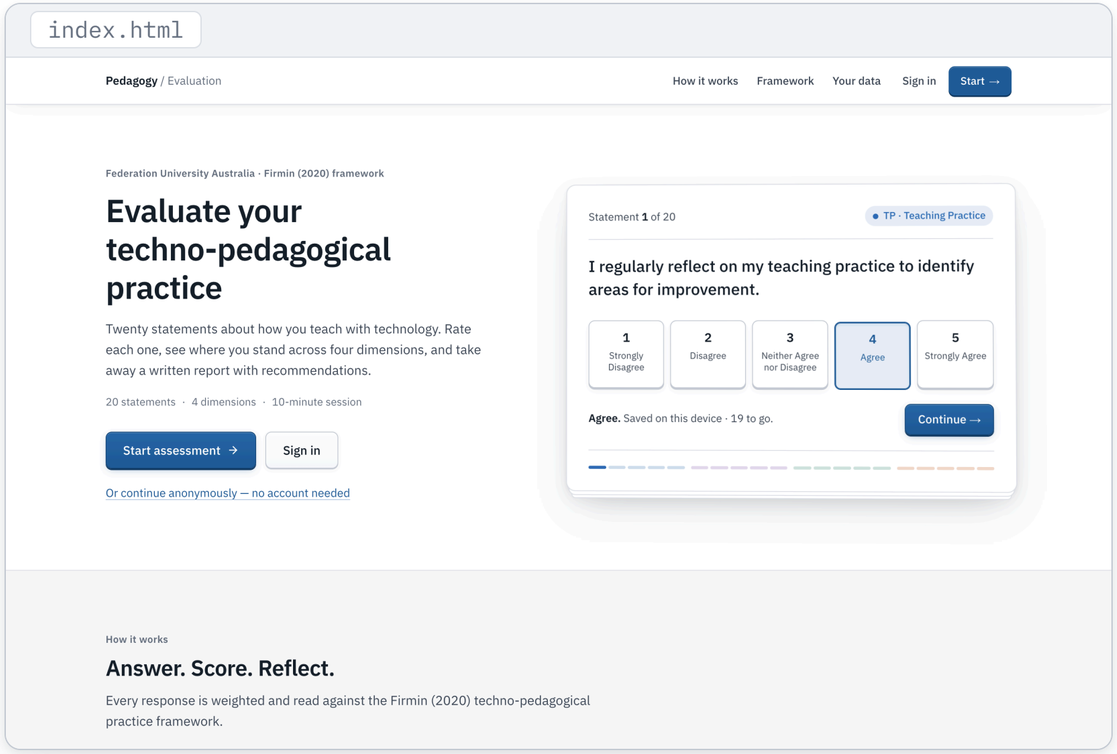

Redesign

From a showpiece to a tool academics can trust.

Before Sprint 4

Sprint 4

Home page

Start in one click. Understand the choice.

index.html#access

Two ways to take part

Track your growth, or just reflect.

Both give you the same questions, scores and report. The difference is what happens to your results afterwards.

With an account — Recommended

Build a record over the years

- ✓ A personal dashboard with up to 3 years of results
- ✓ See whether each category improved, decreased or stayed similar
- ✓ Keep a previous attempt to compare — or delete it so only your latest counts
- ✓ Nothing is stored until you submit

Create account | Sign in

Anonymously

A one-off reflection

- ✓ No account and no name
- ✓ Nothing is stored until you submit
- ✓ Scores and PDF report straight away
- – No year-to-year comparison

Continue anonymously

index.html · mobile

Pedagogy — Sign in — Start →

Federation University Australia · Firmin (2020) framework

Evaluate your techno-pedagogical practice

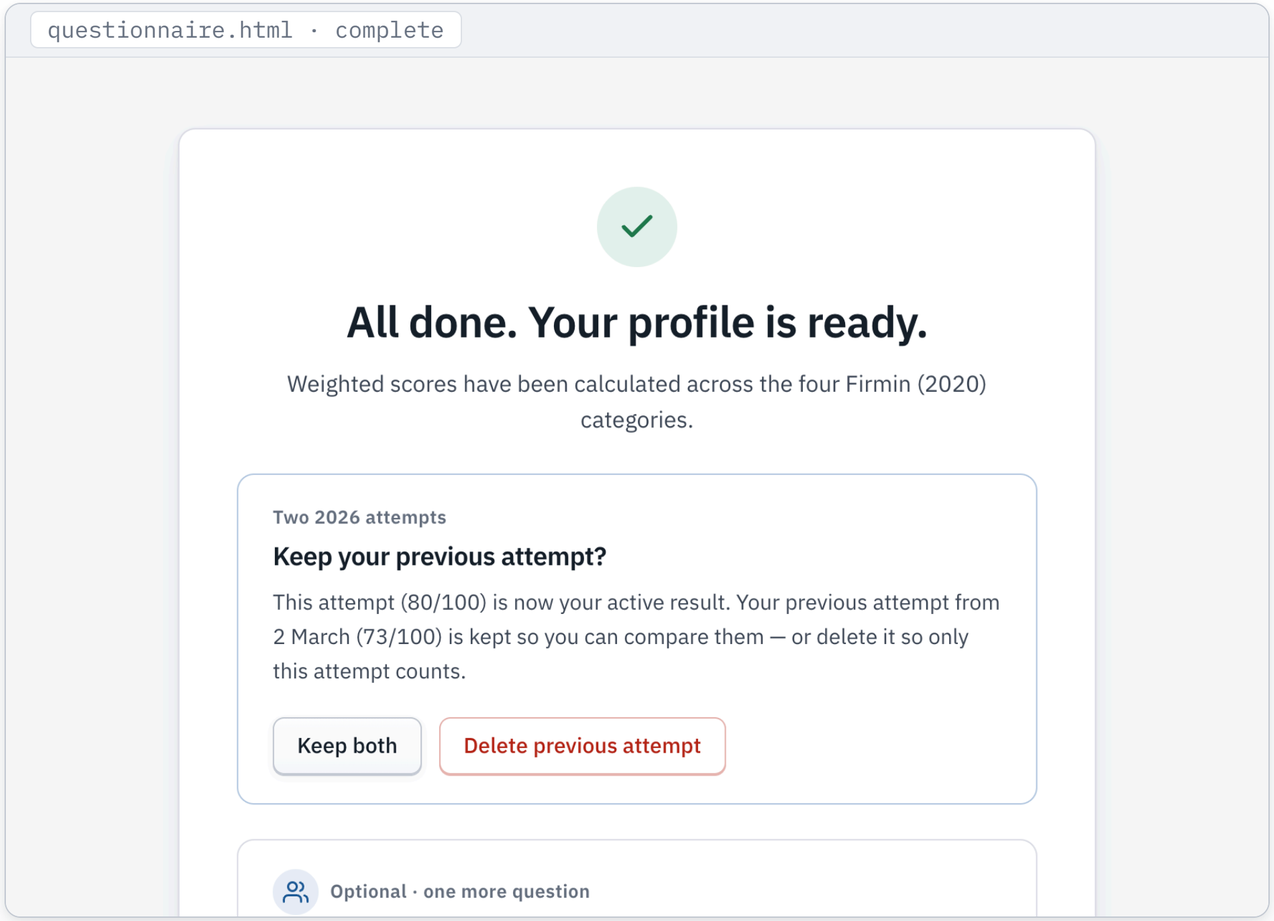

Twenty statements about how you teach with technology. Rate each one, see where you stand across four dimensions, and take away a written report with recommendations.

20 statements · 4 dimensions · 10-minute session

Requirement 3 · Two attempts

Current and previous — the user decides.

- **Newest attempt = active result.** It's the one that counts.
- **Previous attempt is kept** for comparison — up to two per year.
- **Delete or override** the previous attempt at submission or from the dashboard.
- **The active result can't be deleted,** enforced by the database.
- **A third attempt** in the same year replaces the oldest.

Day one

The live platform was down before we started.

1

Symptom

Sign-in and anonymous start both failing on the live site.

2

Diagnosis

Database address returned `NXDOMAIN` from two DNS resolvers. The project had been paused for inactivity; the stored CLI token was revoked.

3

Recovery

Project restored, schema migrations applied in order, and every rule verified against the live database.

4

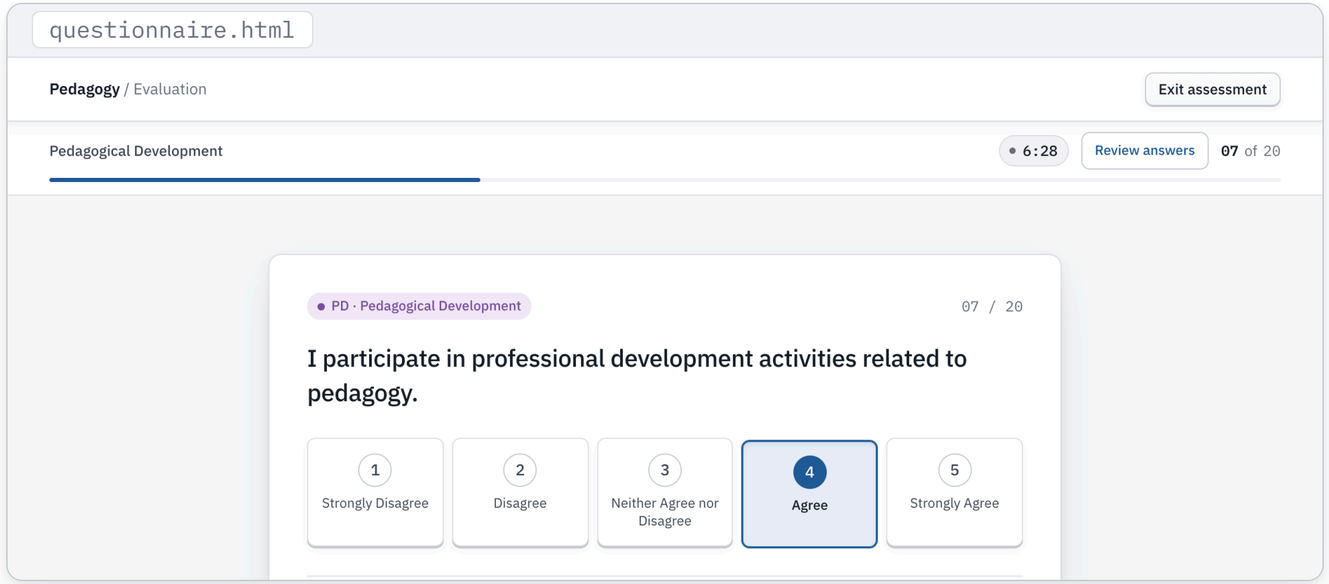

Hardening

Friendly "can't reach the sign-in service" message, offline-safe saving, and a keep-alive plan for handover.

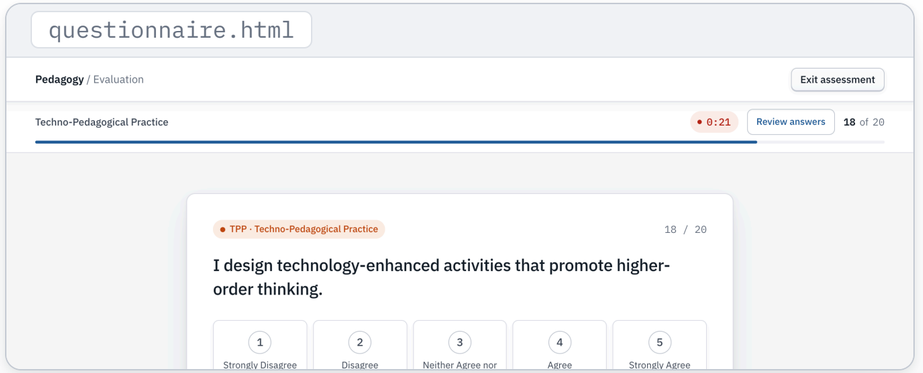

Requirement 5 · 10-minute session

A visible clock, clear warnings, a safe expiry.

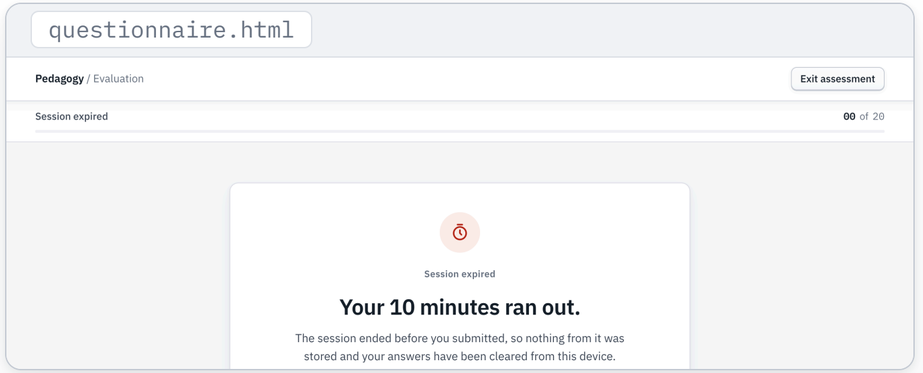

Running — 6 minutes left

Final minute

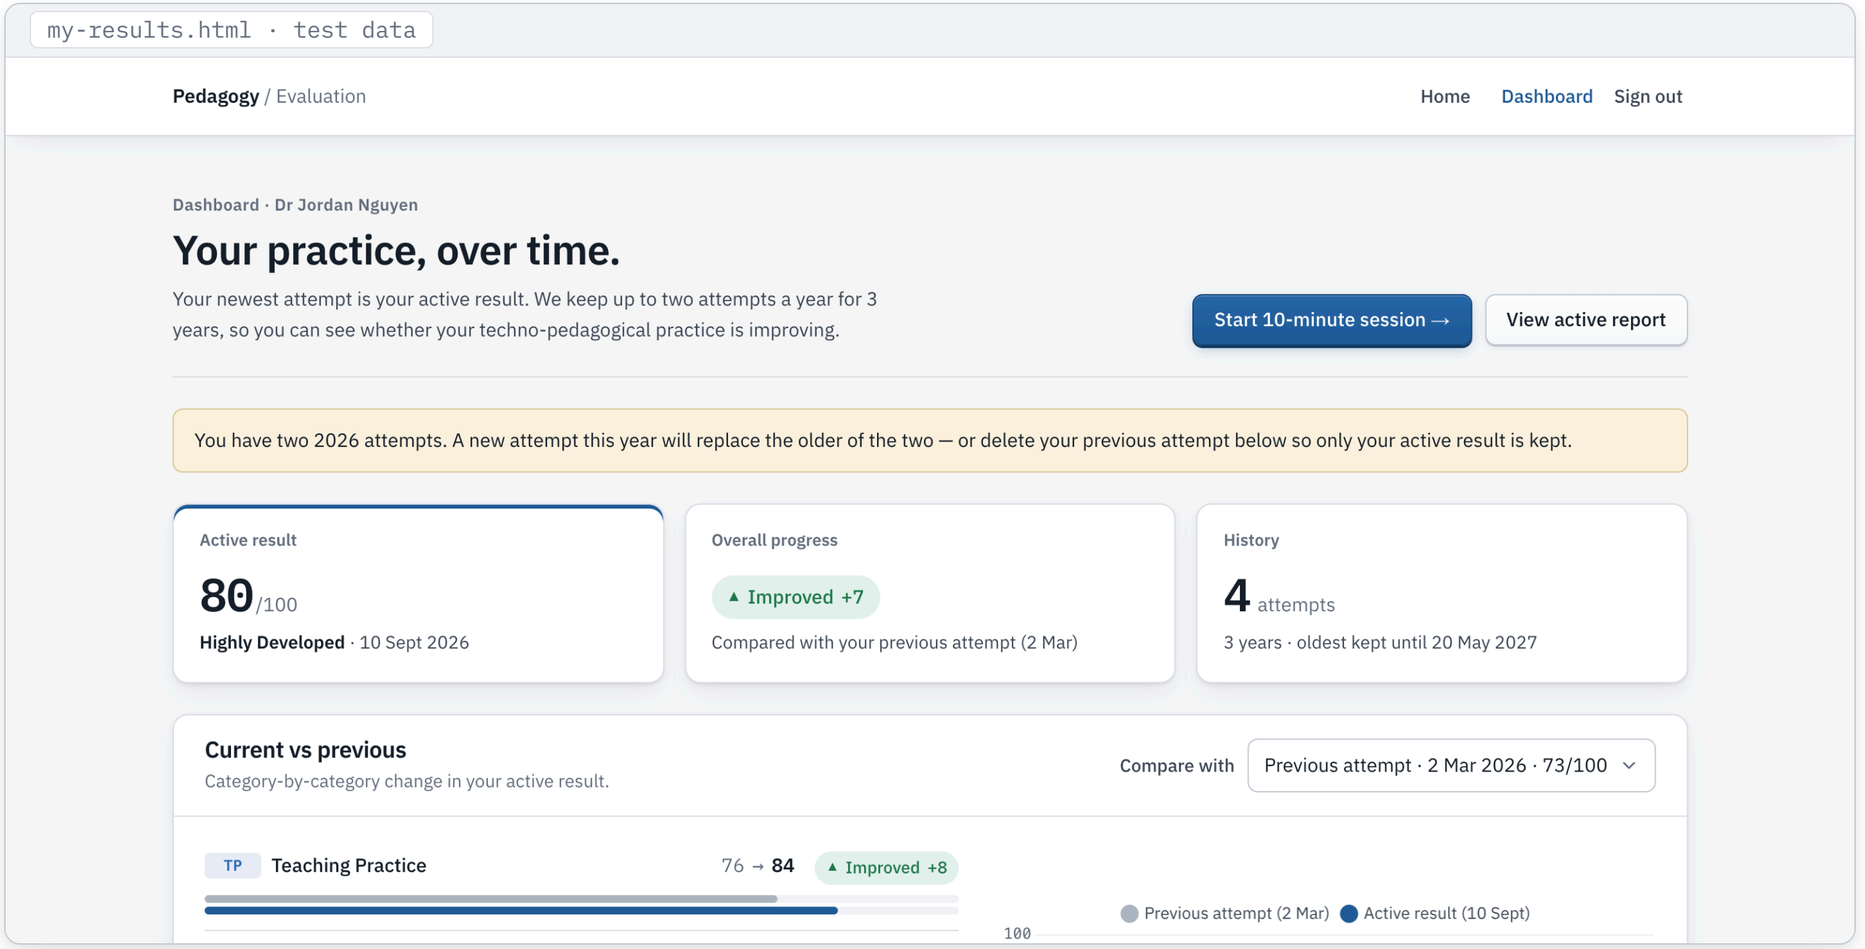

Expired — nothing stored

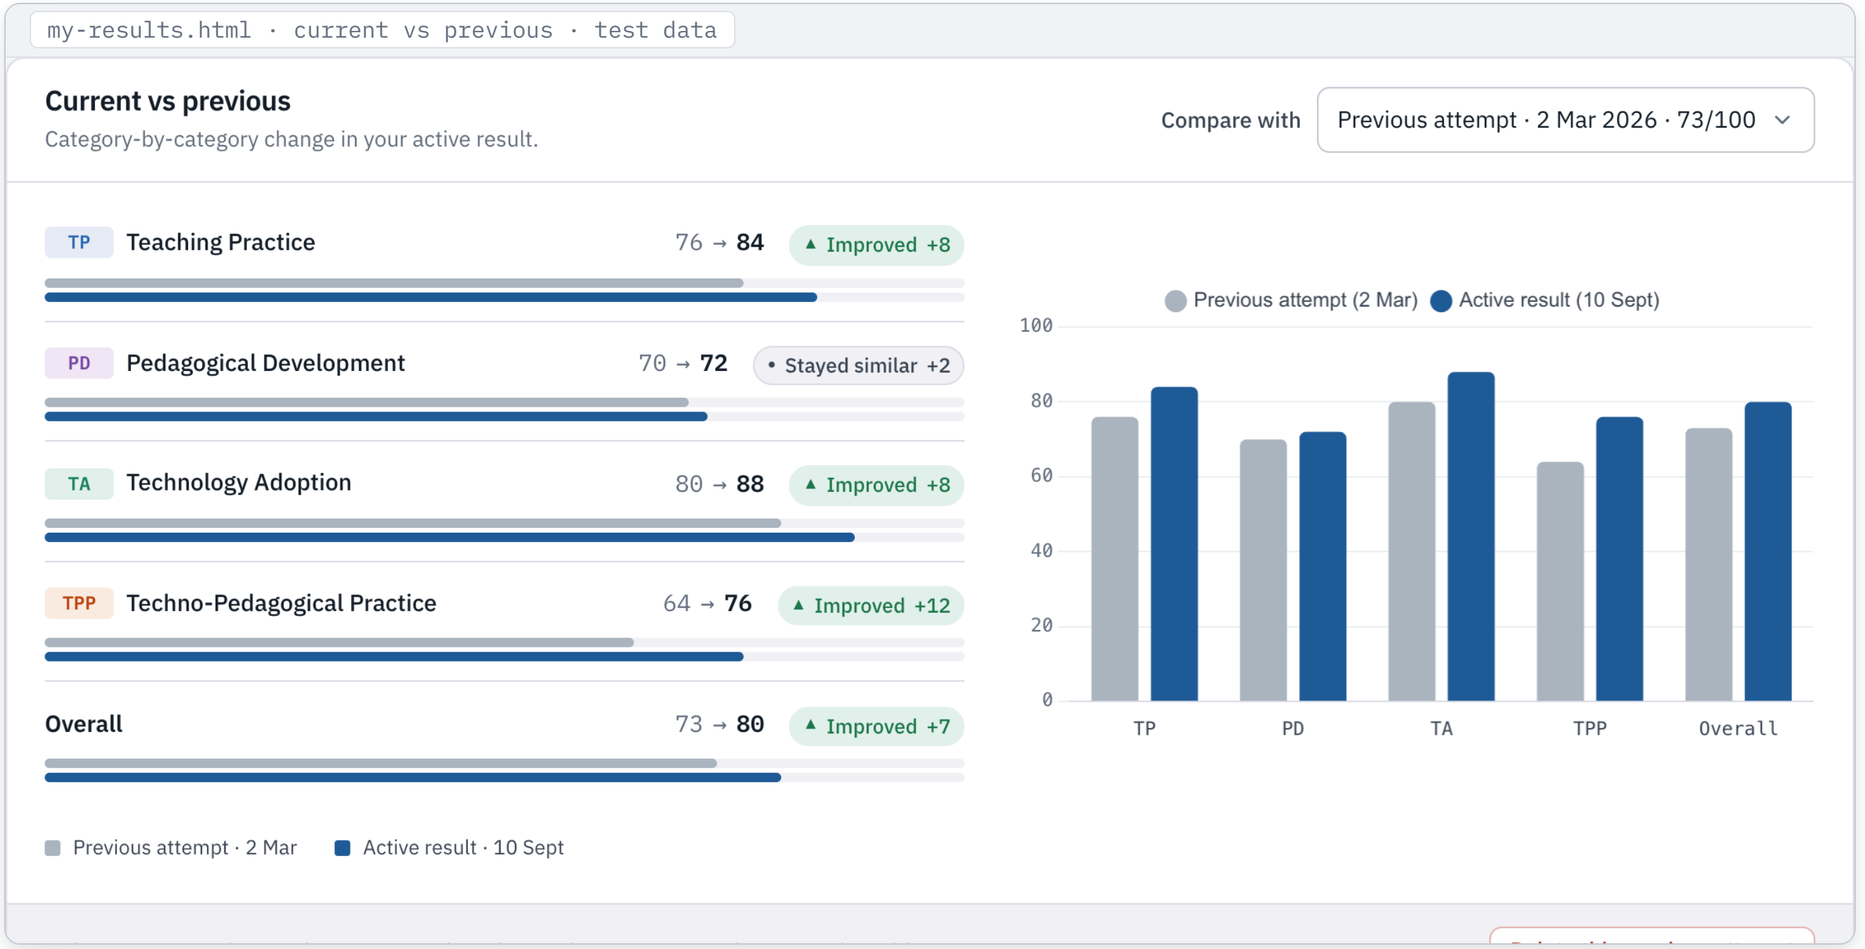

Requirements 1 and 2 · User dashboard

One page that answers: am I improving?

Requirement 4 · Historical comparison

Improved, decreased or stayed similar — per category.

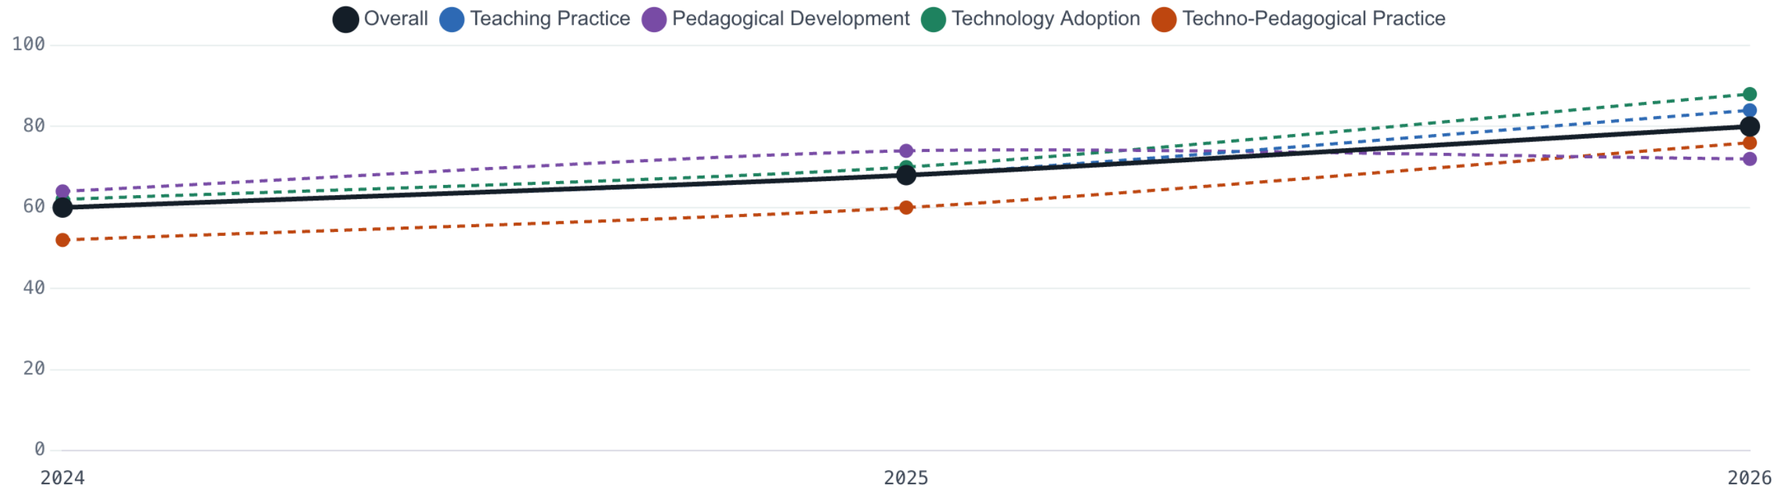

Requirements 2 and 4 · 3-year history

Three years of practice on one chart.

my-results.html · year-to-year · test data

Year-to-year progress

Each year's result (the newest attempt in that year), for up to 3 years.

Year	TP	PD	TA	TPP	Overall	Change from previous year
2026	84	72	88	76	**80**	▲ Improved +12 vs 2025
2025	68	74	70	60	**68**	▲ Improved +8 vs 2024

Engineering

The rules live in the database, not just the page.

Browser

Questionnaire · 10-minute clock · dashboard

`no writes while in progress`

→

`submit_assessment()`

1. All 20 answers valid (1–5)
2. Started ≤ 10 min ago (+1 min grace)
3. Scores recalculated server-side
4. Session + responses in one transaction
5. Two attempts per year kept

→

PostgreSQL · Supabase

Row-level security · `delete_previous_attempt()` · 3-year purge

Live demo

Let’s use it.

1. **Home** — answer statement 1, continue anonymously
2. **Assessment** — 10-minute clock, review screen, submit
3. **Dashboard** — sign in, compare attempts, delete previous
4. **Admin** — new participant appears; charts count active attempts only

`lmctpro2026.github.io/pedagogy-evaluation-platform`

Requirement 6 · Anonymous until completion

Nothing leaves the browser until you submit.

Answer 20 statements

Answers stay on the device.

`0 network requests`

→

Review

Missing answers are named; nothing is scored yet.

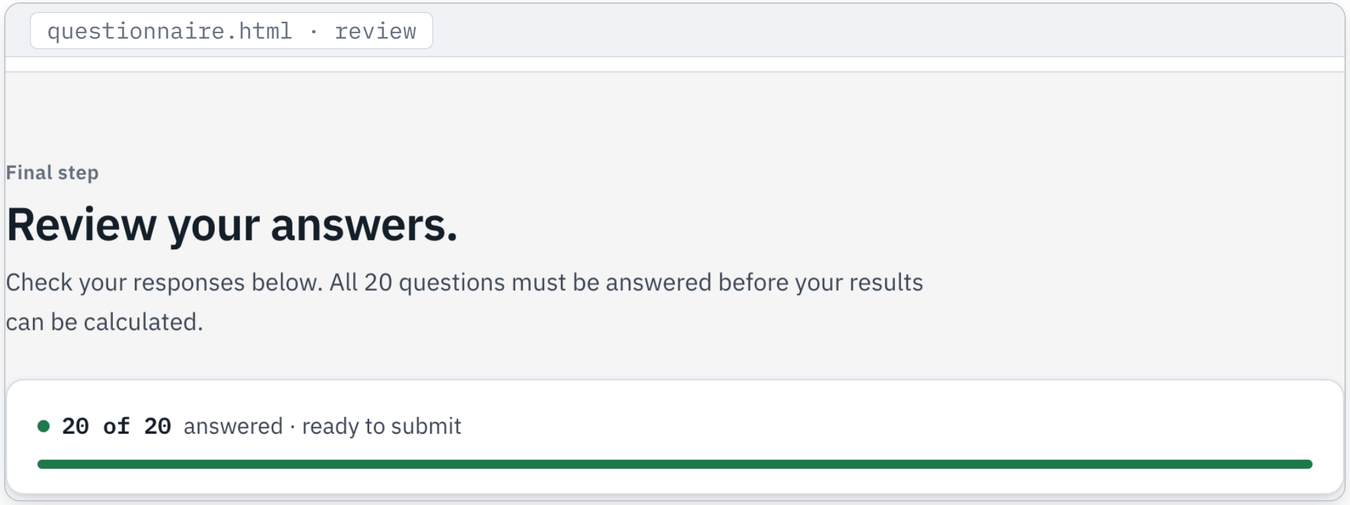

`0 network requests`

→

Submit

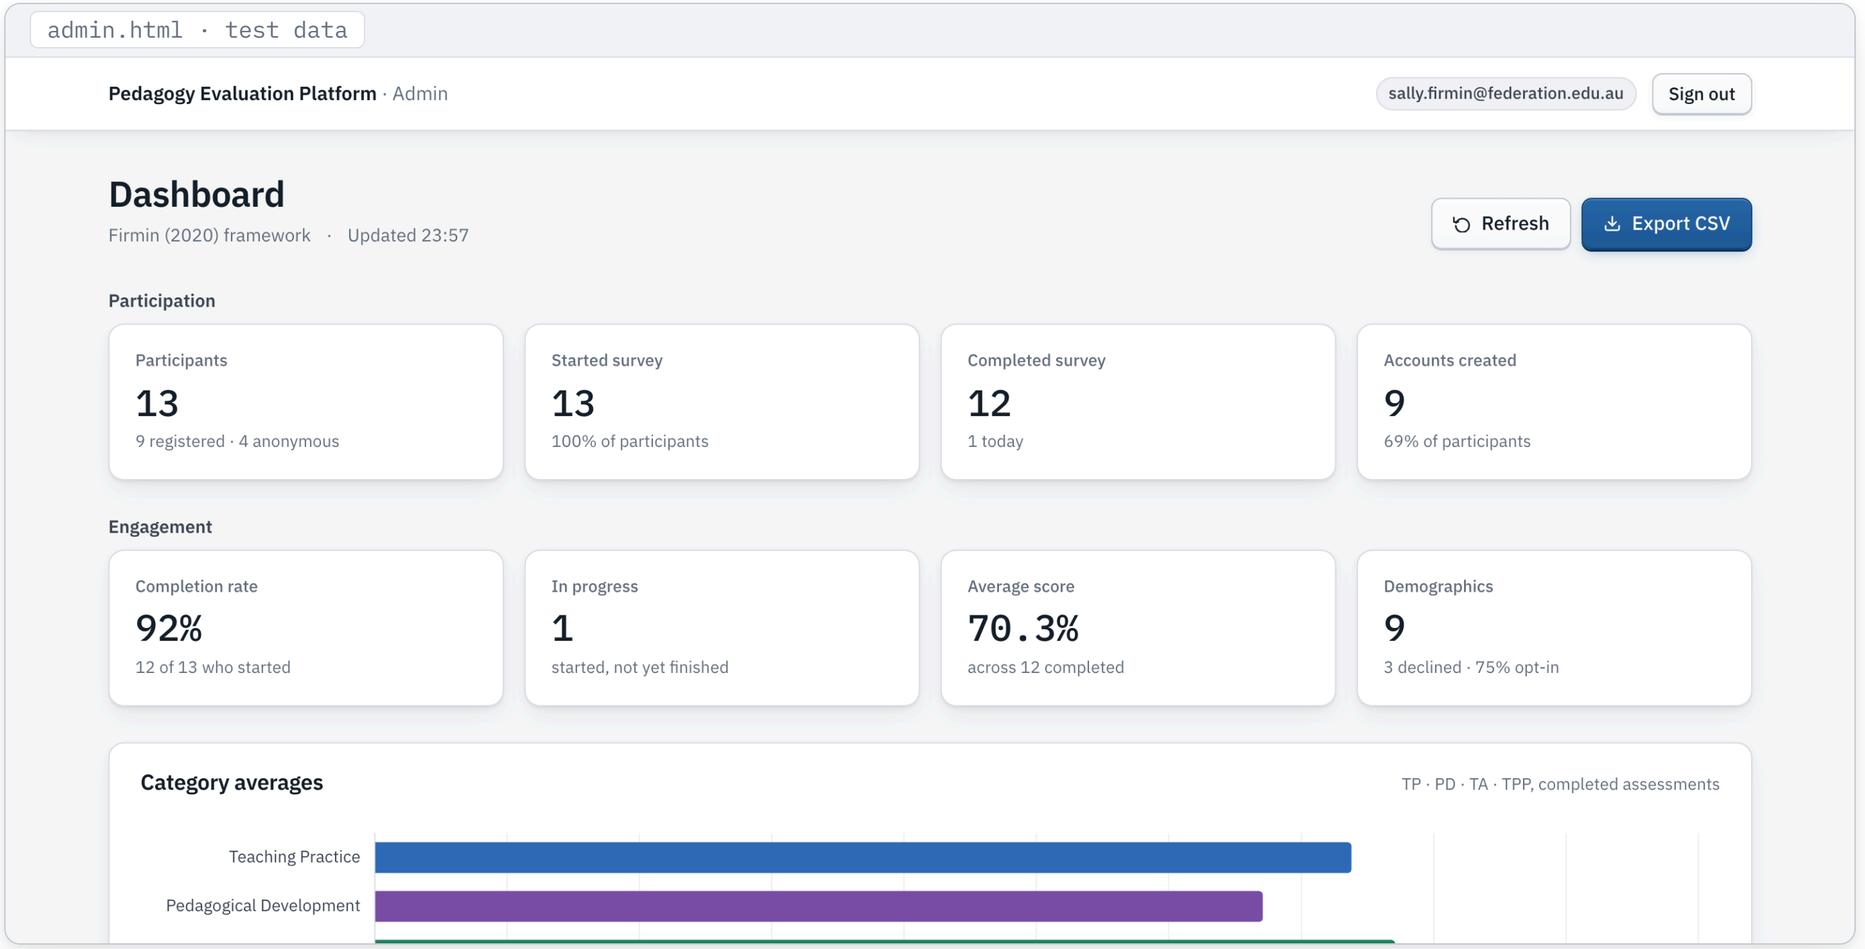

Session + 20 responses stored in one transaction.

`1 database call`

Admin

Research data Dr Firmin can read at a glance.

Quality

Tested in the database, in the browser, and live.

Database · 48 checks

- Store on completion only
- Expired / future / missing start rejected
- Incomplete or invalid answers rejected
- Two per year, oldest dropped
- Delete previous; active undeletable
- Users can't touch each other's data
- 3-year purge

Browser · end to end

- Dashboard: full, one attempt, empty
- Compare switch and delete
- Timer: running, 2 min, 1 min, expired
- Expiry on return and mid-question
- Anonymous run: 0 requests until submit
- Mobile layout at 390px

Live database

- Incomplete submission → rejected
- 20-minute-old session → SESSION_EXPIRED
- Anonymous delete → refused
- Purge not callable from the web
- Demographics table present
- Row-level security hides others' data

Defects

What we caught — before users did.

Found	Impact	Fix
Draft migration deleted same-year attempts	Would remove data the new rule keeps	Rewritten before running live; tested over old version
Anonymous start created database records	Broke "anonymous until completion"	No sign-in or writes until submit
"Continue" visible before answering	Confusing first interaction	Global `[hidden]` rule
Statement card overflowed on phones	Option 5 cut off at 375px	Grid min-width fix, verified on mobile
Sign-in error showed "Failed to fetch"	Unclear during outages	Plain-language service message

Handover

It can run for free — with two risks managed.

Free stack

- GitHub Pages — hosting
- Supabase Free — database + sign-in, 50k monthly users
- Resend Free — 3,000 emails / month

Risks and controls

- Database pauses after 7 idle days → daily keep-alive ping
- No automatic backups → monthly CSV export
- Accounts tied to students → transfer to university accounts

Needed from the university

- DNS records for a sender such as `pep.federation.edu.au`
- Owners for GitHub, Supabase and Resend
- Admin emails to hand over to

Next

Sprint 5: hand it over properly.

1. **Email for everyone** — verified university sender; codes, password reset, results copies
2. **Ownership** — move GitHub, Supabase and Resend to university accounts; rotate every key
3. **Handover guide** — setup, SQL order, admins, what to do if the database pauses
4. **Research views** — scores by age group, gender and academic level

Sprint 4 · Pedagogy Evaluation Platform
